

iglide[®] – clip bearings

Easy installation

Abrasion-resistant

Predictable service life

Custom options possible

Self-lubricating and maintenance-free

Standard range from stock

iglide® clip bearing:
Captured with double flange

iglide® Clip2 bearings:
Easy assembly due to lateral slot,
also available with anti-rotation feature

iglide® flanged clip bearings:
Press in and fold down

iglide® double flanged clip bearings:
Press and plug

Custom solution
iglide® snap on:
Snap into place

iglide® clip bearings

iglide® clip bearings are designed specifically for fitting shafts through sheet metal. For this reason, the bearings have flanges located on both ends. The bearings are secured in the sheet metal plate on both sides after fitting.

The clip bearings have an angled slot which allows the bearings to be fitted from one side. After fitting, the bearing expands and forms a lining for the hole in the metal plate. The shaft prevents the clip bearing from falling out the housing. Even during linear movement, the bearing cannot slide out of the housing.

- Lateral slot for easy installation
- Self-lubricating and maintenance-free
- Easily adapts to punched holes
- Good abrasion resistance
- Quiet
- For rotating and linear movements

Typical industries and applications

- Automotive industry
- Mechanical engineering
- Jigs and fixtures, etc.

Detailed information about delivery time online.

iglide® clip bearing

- Easy to fit due to clip-on feature
- Increased security with the double flange design
- Good abrasion resistance

iglide® split bearings (Clips2)

- Easy to fit
- Tolerance compensation with angled slot
- Low bearing clearance, high precision

iglide® flanged clip bearings

- Easy to fit
- Pressfit
- Axial load on both sides
- Compensation of tolerances of the sheet metal

iglide® double flanged clip bearings

- Easy to fit due to clip-on feature
- Large flange surfaces
- Symmetrical flange
- Remains in place during E-Coat paint process

Special solution

iglide® snap On

- The washer is snapped onto the flanged bearing with undercuts
- Compensation of axial clearance
- Secure pre-assembly possible
- Combination of conductive and non-conductive materials possible

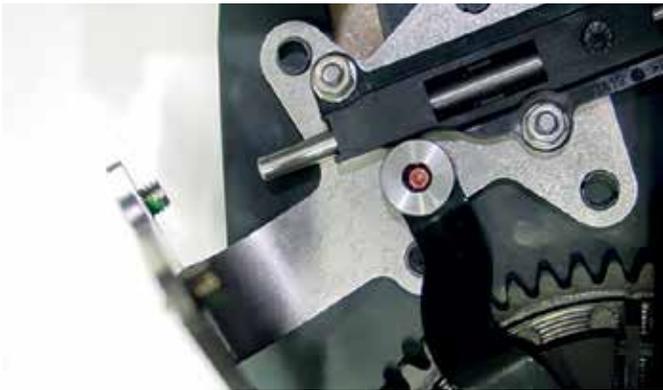

iglide® clip bearings | Application examples

This cutting mechanism is used in the beverage industry. All components meet the requirement of freedom from external lubrication, low cost and reduction of weight

Easy-to-clean and low-cost iglide® clip bearings and iglide® flange bearings are used in a honeycomb processing machine.

By using wear-resistant iglide® clip bearings, the lowering mechanism for radiator mascots on luxury cars could be improved.

The guide rod in this pharmacy printer has been attached using igus® clip bearings.

Rattle-free positioning of seat systems with iglide® plain/clip bearings, e.g. inner/tilt and seat height adjustment.

iglide® clip bearings | Technical data

General properties

The clip bearings have an angled slot which allows the bearings to be fitted from one side. After fitting, the bearing expands and forms a lining for the hole in the metal plate. The shaft prevents the clip bearing from falling out the housing. Even during linear movement, the bearing cannot slide out of the housing. iglide® clip bearings are made from wear resistant material iglide® M250.

iglide® M250 is a plain bearing material with strong wear resistance at average loads. The bearings are self-lubricating and can be used dry. If required the bearings can also be lubricated. The material iglide® M250 is resistant to all common lubricants.

Mechanical properties

The permissible static pressure of iglide® M250 at room temperature is 2,900 psi. Due to the possibility of high tolerances in the housing bore, the clip bearing has a high compressive strength even for punched holes.

For bearing surfaces that are very small, the vibration dampening properties and the resistance to edge loads are especially important.

► iglide® M250,

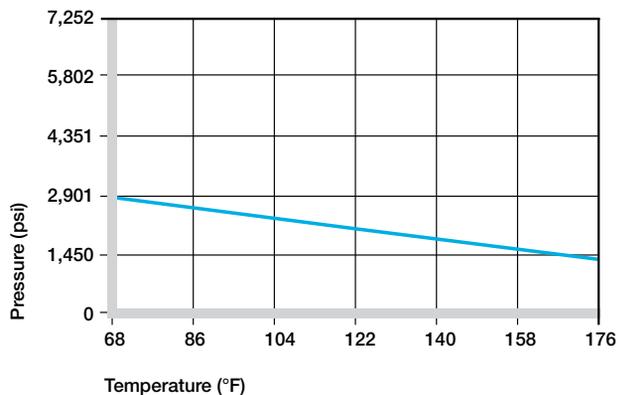

Diagram 01: Recommended maximum surface pressure of as a function of temperature (2,900 psi at +68°F)

Permissible surface speeds

Clip bearings are extremely wear resistant in slow rotating, oscillating, and linear movements. The maximum surface speeds for the different movements are the same as for the material iglide® M250.

With lubrication the permissible speeds can be increased.

► Surface speed,

	Continuous fpm	Short Term fpm
Rotating	157	393
Oscillating	118	275
Linear	492	984

Maximum surface speeds

Temperatures

For operating temperatures up to +176 °F iglide® clip bearings display high wear resistance. Even in the cold, the plain bearings remain elastic and resistant to wear.

► Application temperatures,

iglide® M250	Application temperature
Minimum	-40°F
Max. long term	+176°F
Max. short term	+338°F

Temperature limits

Installation

For installation, the plain bearings are pressed together on the side with the large flange. The angled slot makes the bearing spiral shaped so that it can be placed easily into the metal plate.

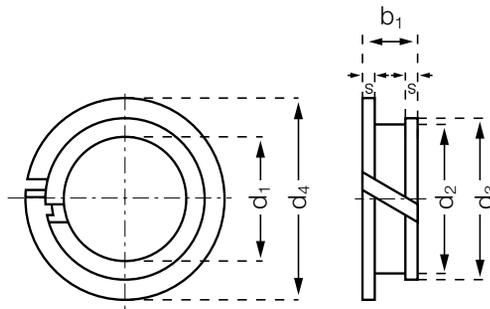

The slot also compensates for expansions of the circumference. In this way, a tight clearance is possible with the clip bearings. The bearing clearance is dimensioned in such a way that in a housing bore with a nominal diameter, a shaft made with the same nominal diameter turns easily. The clip bearings should be fitted into a housing with a "H" class tolerance, up to H13. The clip bearing can also rotate within the housing bore.

iglide® Clip bearings - Custom solution

iglide® Snap-On: connect and snap into place

i Material:
iglide®

The solution for all applications in stamped sheet metal retainers

iglide® Snap-On are frequently used in seat and convertible top systems and multi-joint hinges. iglide® clip-on bearings allow for captured assembly even in punched sheet metal / steering arms with limited fine blanking content.

- Compensation of axial clearance
- Pre-assembly possible
- Electrically conductive materials are available
- Pressure-resistant materials up to 11,600 psi

The snap-on bearings can also be produced from electrically conducting and other materials for e-coating purposes.

Assembly:

The washer is snapped onto the flange bushing with undercuts.

Please contact us if you need a custom-made bearing for your application. We will help you with your design, drawing on the experience that we have with a large number of custom bearing solutions. bearing solutions.
