

# AMETEK®

# Pulsar<sup>®</sup> Model R86 26 GHz Pulse Burst Radar Level Transmitter

#### DESCRIPTION

The Pulsar® Model R86 radar transmitter is the latest generation of Magnetrol® 24 VDC, loop-powered, non-contact radar transmitters. Enhanced performance, proactive diagnostics, and various configuration wizards bring simplicity to an often complex technology.

This latest entry into the radar level measurement field is designed to provide unparalleled performance and ease of use. The 26 GHz PULSAR Model R86 is the perfect complement to the 6 GHz PULSAR Model R96 and Eclipse® Model 706 GWR transmitters. Together, this transmitter family offers the ultimate solution set to those difficult industrial process level applications.

#### TECHNOLOGY

The PULSAR Model R86 radar transmitter is based on pulse burst radar technology combined with equivalent time sampling circuitry. Short bursts of 26 GHz microwave energy are emitted and subsequently reflected from the liquid level surface. Distance is first measured by the equation:

#### D = Transit time (round-trip)/2.

Liquid level is then calculated based on transmitter configuration.

#### APPLICATIONS

MEDIA: Liquids and slurries; hydrocarbons to water-based media (dielectric 1.7–100, 1.4 in stillwell)

VESSELS: Most process or storage vessels up to rated temperature and pressure. Pits and sumps as well as glass-lined tanks.

CONDITIONS: Virtually all level measurement and control applications including process conditions exhibiting varying specific gravity and dielectric, visible vapors, high fill/empty rates, turbulence, low to moderate foam and buildup.

#### FEATURES

- Multivariable two-wire, 24 VDC loop-powered transmitter for level, volume, or flow
- Performance not process dependent (changing specific gravity and dielectric have no effect)
- 26 GHz operating frequency offers superior performance with better accuracy and enhanced resolution
- Antenna designs to +400 °C (+750 °F), -1.0 to 160 bar (-14.7 to 2320 psi)
- Range up to 40 m (130')
- Quick connect/disconnect antenna coupling allows vessel to remain sealed
- 4-button keypad and graphic LCD display allow for convenient viewing of configuration parameters and echo curve
- Proactive diagnostics advise not only what is wrong, but also offer troubleshooting tips
- Convenient Setup and Echo Rejection Wizards (Echo Rejection setup is simple, intuitive, and effective)
- SIL 2 suitable (93.2 % SFF, with full FMEDA report available)
- PACT*ware*™ PC Program and enhanced DTMs for advanced configuration and troubleshooting
- Available with HART® or FOUNDATION Fieldbus™ digital outputs

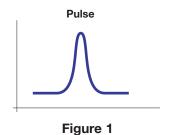

#### PULSE BURST RADAR

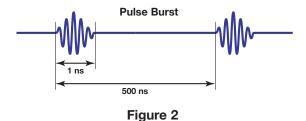

The PULSAR R86 is a top-mounted, downward-facing pulse burst radar operating at 26 GHz. Unlike true pulse devices (e.g., ECLIPSE Guided Wave Radar) which transmit a single, sharp (fast rise-time) waveform of wide-band energy (Figure 1), PULSAR emits short bursts of 26 GHz energy (Figure 2) and measures the transit time of the signal reflected off the liquid surface.

Distance equals the Speed of light multiplied by the transit time divided by two ( $Distance = C \times Transit\ Time/2$ ). Level is then calculated by factoring in tank height and other configuration information (Figure 3). The reference point for distance and level calculations is the sensor reference point (bottom of an NPT thread, top of a BSP thread, or face of the flange).

The exact level measurement is extracted from false target reflections and other background noise via the use of sophisticated signal processing. The new PULSAR Model R86 circuitry is extremely energy efficient so no duty cycling is necessary to accomplish effective measurement.

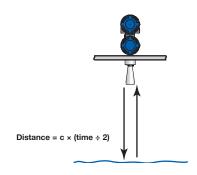

Figure 3

#### OPERATIONAL CONSIDERATIONS

Radar applications are characterized by three basic conditions:

- Dielectric (process medium)
- Distance (measuring range)
- Disturbances (turbulence, foam, false targets, multiple reflections)

The PULSAR R86 Radar transmitter is offered with several horn antenna sizes and configurations:

- 1 1/2"
- 2"
- 3"
- 4"

Maximum measuring range (distance) is measured from the sensor reference point (bottom of NPT thread, gasket face of BSP thread, or gasket face of flange) to the bottom of the tank. Refer to Figure 4.

Since larger horns yield stronger signals and smaller beam angles, the 4" horn antenna should ideally be used to ensure the best possible performance in all operational conditions. However, as that is often impractical, other antenna sizes are available.

The chart (Figure 5) shows the maximum measuring range of each antenna based on dielectric and turbulence.

Obstructions, noise and media buildup can drastically decrease reliable measurement. Although it is theoretically possible to measure a liquid level on the antenna, liquid should not be allowed closer than:

#### For Metal Antennas:

50 mm (2") from the bottom of the antenna or 300 mm (12") from the sensor reference point (whichever is greater). Refer to Figure 6.

#### For Encapsulated Horn Antennas:

50 mm (2") from the bottom of the antennal or 300 mm (12") from the launch point (whichever is greater). Refer to Figure 6.

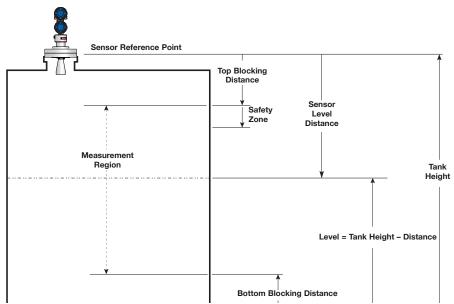

Figure 4

| R86 Maximum Recommended Measuring Range in meters (feet) |              |         |          |           |                          |         |          |  |  |  |

Figure 5

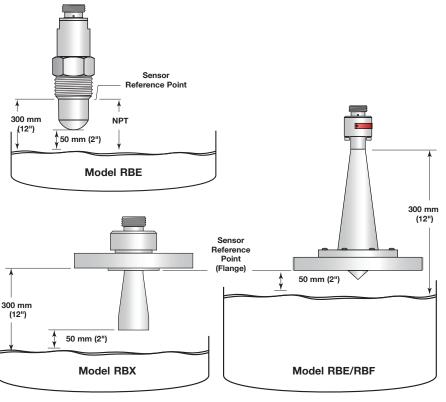

Figure 6

#### MOUNTING

The PULSAR Model R86 Radar transmitter can be mounted on a vessel using a variety of process connections. Generally either a threaded or flanged connection is used.

#### LOCATION

Ideally, the Radar transmitter should be mounted 1/2 radius from center of the tank providing an unobstructed signal path to the liquid surface where it can illuminate (with microwave energy) the largest possible surface area. A conservative recommendation is to not install in center of tank top or within 45 cm (18") of tank wall. Tank walls may produce reflections that must be minimized during field configuration. Refer to Figure 7.

#### BEAM ANGLE

The various antenna sizes exhibit different beam patterns. Figure 9 shows the beam spread for all PULSAR Model R86 antennas. Ideally the beam pattern should illuminate the maximum liquid surface with minimum striking of other objects in the vessel including the tank wall. Use these drawings to determine the optimum installation location.

#### O B S T R U C T I O N S

Almost any object that falls within the beam pattern will cause reflections that may be misinterpreted as a false liquid level. Although the PULSAR Model R86 has a powerful Echo Rejection routine, all possible precautions should be taken to minimize false target reflections with proper installation location. Refer to Figures 8 & 9.

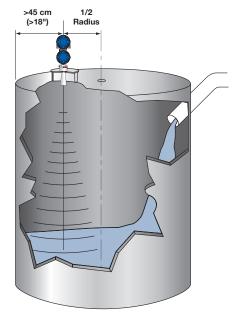

Figure 7

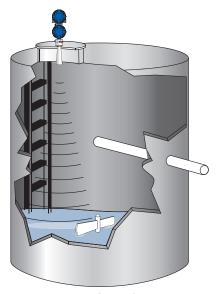

Figure 8

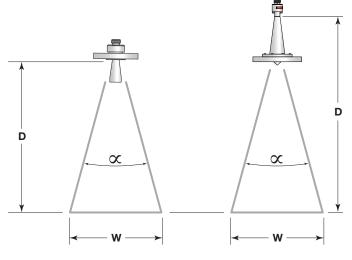

Figure 9

#### MOUNTING

#### NOZZLES

Improper installation in a nozzle creates "ringing" (undesired signals) which can adversely affect measurement. The antenna should always be mounted such that the active section of the antenna is a minimum of 13 mm (0.5") below the nozzle. Be sure to include any nozzle dimension that may extend down inside the vessel. Refer to Figure 10. Antenna extensions are offered to allow the PULSAR Model R86 transmitter to work reliably in nozzles with an "L" dimension up to 1.8 m (72").

# "L" Dimension (Nozzle Height) \$\frac{1}{4}\$ 50 mm (2") 13 mm (0.50") Minimum

Figure 10

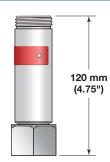

#### ORIENTATION

The PULSAR Model R86 transmitter utilizes circular polarization. This means that the microwave beam does not need to be manually adjusted (rotated) during commissioning as is necessary with other radar transmitters. The result is a much simpler start-up process.

#### TEMPERATURE EXTENSION

## HEAT EXTENSION FOR USE WITH HIGH TEMPERATURE/HIGH PRESSURE ANTENNAS

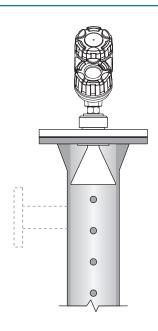

To limit the temperature exposure to the transmitter in high temperature applications, a heat extension (P/N 032-6922-001) is required between the antenna and transmitter. Refer to "Operating Temperature Range" chart on page 6.

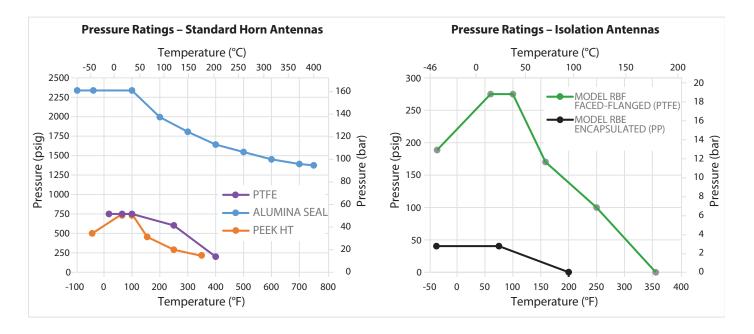

#### STANDPIPES AND STILLWELLS

The PULSAR Model R86 can be mounted in a standpipe or stillwell but certain items must be considered:

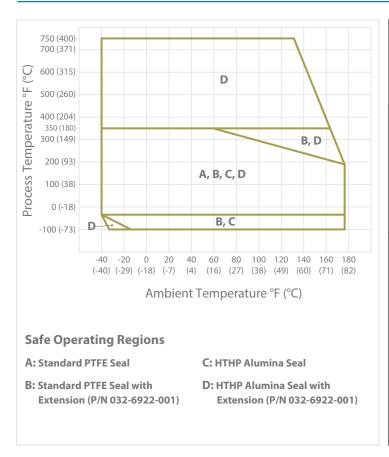

- Metal stillwells only: Inside diameter 45–200 mm (1 3/4"–8").
- Diameter must be consistent throughout length; no reducers or gaps.
- Use only horn antennas sized to pipe ID; 38–101 mm (1 1/2"–4"); 8" pipe can use 4" horn.
- Stillwell length must cover complete range of measurement (i.e., liquid must be in stillwell).
- Welds should be smooth.
- Vents: holes < 3 mm (0.125") diameter, slots < 3 mm (0.125") width.
- If an isolation valve is used, it must be a full port ball valve with an ID equal to the pipe diameter.
- Configuration must include a non-zero entry for pipe ID parameter.

## MIXING AND BLENDING VESSELS

**CONDITIONS - Turbulence, Foam, and Changing Dielectric** 

#### OPEN CHANNEL FLOW APPLICATIONS

## **Extensive Selection of Primary Flow Elements**

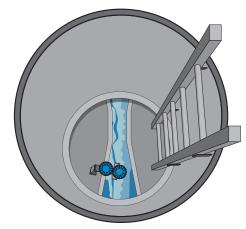

With a total of 35 flume and weir curves stored in the electronics, it would be hard to find an open channel flow application that cannot be handled by the R86 transmitter. Unusual flow applications can readily be accomplished through the use of either the 20-point Custom Table or the Generic Discharge Flow Equation which allows a direct entry of unique flow equations.

#### **Dual Flow Totalizers**

Two 7-digit flow totalizers are provided for recording flow in cubic feet, gallons, million gallons, liters, million liters, or cubic meters. One totalizer is resettable and the other is non-resettable. Several multipliers are selectable to allow for proper scaling. Totalizer time is also recorded to show how long each totalizer has been recording flow.

## ENCLOSED FLUMES AND WEIRS

CONDITIONS - Turbulence and Changing Dielectric

NOTE: For optimal accuracy, mount the transmitter a minimum of 75 cm (30") above the flow element (this is dependent on type and size of the flow element). Consult factory for assistance on this dimension.

#### PROBLEMATIC APPLICATIONS

#### GUIDED WAVE RADAR ALTERNATIVE

Some applications can be problematic for Non-Contact Radar. The following are examples of when Guided Wave Radar is recommended.

- Extremely low dielectric media ( $\varepsilon_r$ <1.7)
- Very weak reflections from the liquid surface (particularly during turbulence) can cause poor performance.
- Tanks heavily cluttered with false targets (mixers, pumps, ladders, pipes, etc.)
- During times of very low liquid levels of low dielectric media, the metal tank bottom may be detected, which can deteriorate performance.
- Foam can either absorb or reflect the microwave energy depending upon the depth, dielectric, density and wall thickness of the bubbles. Due to typical variations in the amount (depth) of foam, it is impossible to quantify performance. It may be possible to receive most, some or none of the transmitted energy.
- Extremely high liquid level (Overflow) conditions when liquid very near the antenna can cause erroneous readings and measurement failure.
- Interface applications
   Refer to ECLIPSE Model 706 Guided Wave Radar bulletin BE 57-106.

"This equipment with chargeable non-conductive parts, e.g. enclosure's paint and antenna use PTFE, Co-polymer Polypropylene or Noryl En265, is provided with a warning label referring to the safety measures that must be taken if there is electrostatic charging during operation. For use in hazardous area, the equipment and side to be installed, e.g. tank, must be connected to earth and be attention to not only the measuring object, e.g. liquids, gases, powders and etc., but also the related conditions, e.g. tank container, vessel and etc. (According to IEC 60079-32-1)."

#### FCC (ID# LPN-R86) Compliance Statement:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

## ANTENNA SPECIFICATIONS

#### FUNCTIONAL/PHYSICAL

| Antenna Material                        | 316 SS, Hastelloy C, Polypropylene or PTFE            |
|---|---|
| Process Seal Material                   | PEEK, PTFE with O-rings or Alumina                    |
| Maximum Process Temperature             | +400 °C @ 94,8 bar (+750 °F @ 1375 psi)               |
| Maximum Process Pressure                | -1,0 to 160 bar @ +20 °C (-14.7 to 2320 psi @ +70 °F) |
| Vacuum Service                          | Hermeticity to <5 × 10 <sup>-7</sup> cc/sec helium    |
| Minimum Dielectric (application depende | nt) 1,7 (1,4 with stillwells)                         |

## TRANSMITTER MODEL NUMBER

#### QUICK RESPONSE CELL (QRC)

Several models are available for extra quick shipment, within max. 15 days after factory receipt of purchase order, through the Quick Response Cell (QRC). To take advantage of QRC, simply match the green model number codes.

QRC delivery is limited to a maximum of 10 units per order. Contact your local representative for lead times on larger volume orders, as well as other products and options.

THE QUALITY ASSURANCE SYSTEM IN PLACE AT MAGNETROL GUARANTEES THE HIGHEST LEVEL OF QUALITY DURING THE DESIGN, THE CONSTRUCTION AND THE SERVICE OF CONTROLS.

OUR QUALITY ASSURANCE SYSTEM IS APPROVED AND CERTIFIED TO ISO 9001 AND OUR TOTAL COMPANY IS COMMITTED TO PRO-

OUR QUALITY ASSURANCE SYSTEM IS APPROVED AND CERTIFIED TO ISO 9001 AND OUR TOTAL COMPANY IS COMMITTED TO PRO-VIDING FULL CUSTOMER SATISFACTION BOTH IN QUALITY PRODUCTS AND QUALITY SERVICE.

#### PRODUCT WARRANTY

ALL MAGNETROL ELECTRONIC AND ULTRASONIC LEVEL CONTROLS ARE WARRANTED FREE OF DEFECTS IN MATERIALS AND WORK-MANSHIP FOR 18 MONTHS FROM THE DATE OF ORIGINAL FACTORY SHIPMENT. IF RETURNED WITHIN THE WARRANTY PERIOD; AND, UPON FACTORY INSPECTION OF THE CONTROL, THE CAUSE OF THE CLAIM IS DETERMINED TO BE COVERED UNDER THE WARRANTY; THEN, MAGNETROL INTERNATIONAL WILL REPAIR OR REPLACE THE CONTROL AT NO COST TO THE PURCHASER (OR OWNER) OTHER THAN TRANSPORTATION.

MAGNETROL SHALL NOT BE LIABLE FOR MISAPPLICATION, LABOR CLAIMS, DIRECT OR CONSEQUENTIAL DAMAGE OR EXPENSE ARISING FROM THE INSTALLATION OR USE OF THE EQUIPMENT. THERE ARE NO OTHER WARRANTIES EXPRESSED OR IMPLIED, EXCEPT, SPECIAL WRITTEN WARRANTIES COVERING SOME MAGNETROL PRODUCTS.
